

## Valspar Automotive Introduces New Air Cure Clearcoats to the Valspar Refinish Product Line

MINNEAPOLIS — Valspar Automotive is excited to announce the addition of Air Cure Clearcoat technology into the Valspar Refinish product line. Valspar Automotive prides itself on offering the newest technology to all shops, bringing you the latest and most advanced clearcoats available on the market today.

“Valspar Automotive utilizes cutting edge research and technology to bring to market products which are finely tailored to the specific needs of body shops focused on speed AND the bottom line,” said **Peter Willman, General Manager, Valspar Automotive, North America.**

Our new AD4200 Air Cure Clearcoat and our AD4221 Air Cure Clearcoat Low VOC were created with a keen focus on speed and quality. Profitability is of paramount importance to body shops today and these clearcoats were devised with shop cost savings in mind.

These clearcoats utilize a wet-on-wet application, requiring no flash time between coats and offer a dry time of as little as 30 minutes, depending upon conditions. With clean shop conditions, this product lays out to such a fine finish, nib sanding and buffing are usually not necessary.

Valspar Refinish continues to strive for shop profitability, making your bottom line shine.
